PROJECT TITLE

****creative Student Portfolio
Using FWD***

AGENDA

- 1. Problem Statement***
- 2. Project Overview***
- 3. End Users***
- 4. Tools and Technologies***
- 5. Portfolio design and Layout***
- 6. Features and Functionality***
- 7. Results and Screenshots***
- 8. Conclusion***

PROBLEM STATEMENT

problem statement is a clear and concise description of an issue that needs to be addressed. It defines the gap between the current state and the desired future state, outlining the problem, its impact, and why it's important to solve. It's a crucial step in problem-solving, project management, and research, helping to focus efforts and align stakeholders.

PROJECT OVERVIEW

project overview is a concise summary document that provides a high-level framework of a project, detailing its goals, objectives, scope, key deliverables, timeline, resources, and budget. It serves as a central reference for team members, clients, and stakeholders to ensure everyone is aligned on the project's purpose and expected outcomes

WHO ARE THE END USERS?

End users are the individuals who directly use a final product, service, or technology to fulfill their needs, distinct from those who develop, sell, or maintain it. For instance, an employee who uses software provided by their company, or a child eating a chocolate bar bought by a parent, are examples of end users. Understanding end users is crucial for product developers to create intuitive and functional products that address real-world use cases.

TOOLS AND TECHNIQUES

tool is a physical instrument or a tangible item like software used to perform a task, while a technique is a systematic method or procedure for how that task is accomplished. Tools help execute tasks, whereas techniques guide the execution process, making the terms complementary in achieving a desired product or result. For example, a screwdriver is a tool, and the technique of turning it to tighten a screw is how you use it.

POTFOLIO DESIGN AND LAYOUT

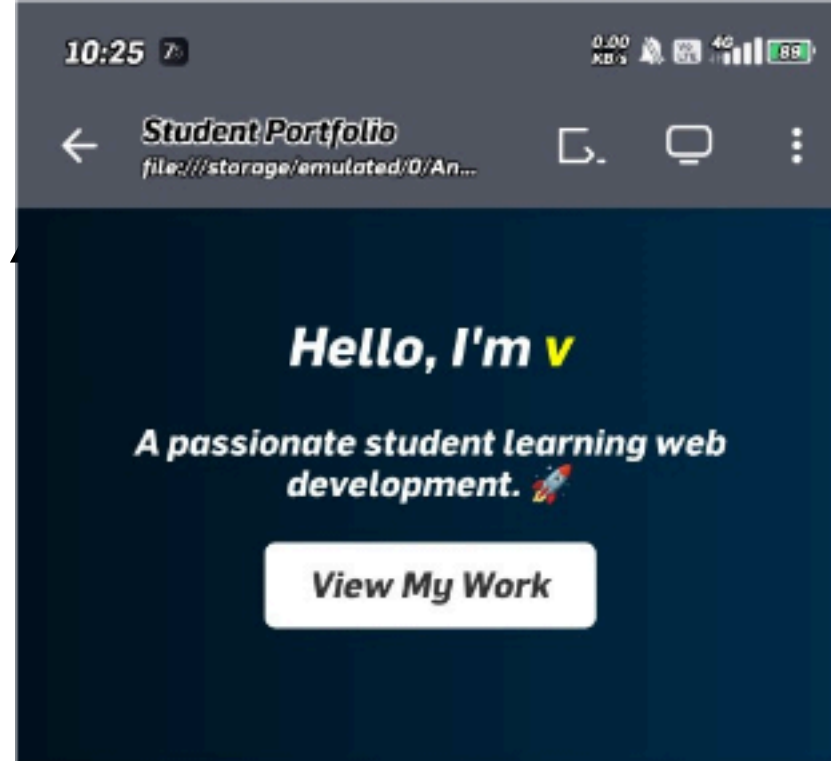

well-designed portfolio layout showcases your work and tells your story, making it easy for viewers to understand your skills and unique selling points. Key principles include a clean, intuitive structure, high-quality images, and a consistent visual identity.

FEATURES AND FUNCTIONALITY

Features are the tangible attributes or components of a product or service, such as a smartphone's camera or a software's user interface. Functionality describes the actions and overall capabilities of the product or service, including how well it performs its tasks to fulfill user needs and provide value. In essence, features are the "what" a product has, while functionality is the "how well" it does things.

RESULTS

NSHOTS

•

About Me

CONCLUSION

The project has been a resounding success,empowering students and young laeders with the,knowledge and confidence to become innovation problem-solvers and change makers
